

## THE MAGIC TOUCH: INTERACTIVE SCREEN TECHNOLOGY FOR CHILDREN

### New Westminster Children's Centre

November 13, 2014 \* 10am-12pm

Child-minding Provided \* Registration Required

*Gain a better understanding of children's needs in a rapidly changing world of technology*

Recent advances in interactive entertainment and technology are changing the environment which children grow and learn. Parents, teachers, and caregivers are bombarded with conflicting information about the benefits and risks these innovations may have on a child's development. At this workshop, participants will learn how and when these interactive devices may be introduced to support a child's developmental well-being.

**About the Presenter:** Michaela Wooldridge, M.A. is currently completing a PhD in Human Development, Learning & Culture at UBC. Her research interests involve the development of infants and toddlers in the digital age.
